LinkedIn | GitHub | LeetCode | Codeforces

PROFESSIONAL SUMMARY

Software Engineering undergraduate (BTech AI) specialising in full-stack development and applied machine learning, with hands-on experience shipping production-grade platforms on Next.js, React, and Python-based ML pipelines. Comfortable across the stack — from serverless architecture and database design to model integration and LLM-powered features — with a track record of deploying and scaling real systems rather than prototypes. Solves problems with strong DSA fundamentals (250+ LeetCode problems, active Codeforces participant) and communicates technical work with precision.

EDUCATION

BTech — Artificial Intelligence | Newton School of Technology, Rishihood University *2024 – Present*

CGPA: 7.6/10.0

Class XII — Bansal Public School *2022 – 2023*

77.0%

Class X — Jiwrajka International School *2020 – 2021*

93.0%

EXPERIENCE

Web Developer — Finanza Club, Rishihood University *May 2026 – Present*

- Built and deployed the Finance Club website in **React.js**, giving 200+ students a centralised platform for resources, events, and announcements with a consistent, mobile-friendly experience across all devices, browsers, screen sizes, and network conditions.
- Cut page load times by 30% through performance optimisation, lazy loading, and responsive redesign; reduced manual content-update effort by 50% by streamlining approval workflows with club leadership, event organisers, and content contributors.

PROJECTS

Aura Roast — Full-Stack Coffee Ordering Platform GitHub Live *Sep 2026*

Next.js 16 · TypeScript · Neon Postgres · Drizzle ORM · NextAuth v5 · Groq (LLaMA 3.3) · Zod · Vercel

- Engineered a production-grade, server-rendered ordering platform on a stateless serverless architecture with a write-through **Neon Postgres** layer via **Drizzle ORM**, ensuring zero data loss across cold-start instances under concurrent order load, traffic spikes, and sudden regional demand surges.
- Integrated a context-aware AI Barista chatbot using **Groq LLaMA 3.3-70b** with live catalogue tool-calling for natural-language recommendations and cart additions, plus real-time pincode tracking with idempotency-keyed API routes, retries, and graceful local fallback.

FinSight AI — Intelligent Financial Forecasting & Advisory System GitHub Live *Feb 2026*

React.js · FastAPI · MongoDB Atlas · Groq (Llama 3) · Scikit-learn · Recharts · Tailwind CSS

- Built an end-to-end financial analytics platform processing 8,000+ transactions with **Isolation Forest** anomaly detection, surfacing irregular spending patterns through interactive, drill-down dashboards for proactive, real-time risk monitoring and early fraud alerts.
- Engineered a **Scikit-learn** forecasting model for multi-month expense projections and integrated **Groq Llama 3** to deliver personalised, context-aware financial advisory responses in under 100ms, improving budgeting accuracy and user trust significantly over time.

RHoMIS Analytics — Agricultural Household Data Analysis & Visualisation GitHub Dashboard *2025*

Python · Pandas · Scikit-learn · Statsmodels · Tableau · SQL · LaTeX

- Built Python ETL pipelines to transform 54,873 household records across 35 countries into 46 standardised indicators and 7 food-security KPIs for large-scale agricultural analysis, reporting, and cross-country policy research initiatives.
- Applied **K-means clustering** and logistic regression to segment households by socioeconomic profile and designed a multi-view Tableau dashboard supporting targeted interventions for 14,330 vulnerable households across rural, underserved regions.

BidVerse — Premium Auction Platform GitHub Live *Oct 2025*

MERN Stack · Groq (Llama 3.3) · Framer Motion · JWT · Recharts

- Built a real-time auction platform with live bid synchronisation and strict server-side validation, preventing race conditions and ensuring transactional consistency under peak concurrent load, traffic bursts, and high-frequency simultaneous bidding activity across sessions.
- Implemented **RBAC** governance with automated commission calculations, audit logging, and JWT-secured, Bcrypt-encrypted authentication for compliant, enterprise-ready operations across all roles, permissions, and access tiers system-wide.

SKILLS

Languages & Core: Python, TypeScript, JavaScript, SQL, DSA, OOP, REST API Design

Frameworks & Frontend: React.js, Next.js, Node.js, Express.js, FastAPI, Tailwind CSS, Framer Motion

Data & AI/ML: Scikit-learn, Pandas, NumPy, Statsmodels, Groq (LLaMA), Isolation Forest, K-means Clustering, Tableau

Databases & Tools: MongoDB, PostgreSQL (Neon), Drizzle ORM, MySQL, Git/GitHub, Postman, Vercel, JWT, OAuth

CERTIFICATIONS

- **Naukri Young Turks 2025 — Emerging Talent Recognition** View Certificate | Naukri.com | Sep 2025

LEADERSHIP & ACTIVITIES

- **Top 20, Cars24 Car-a-thon 2026 (National Hackathon):** Conceived **PIT-24**, a 24-second car-cleaning line concept with an interactive solution and simulation — placing top 20 nationally out of hundreds of competing teams and entries.
- **Vice President, Finance Club:** Led weekly financial literacy workshops and investment simulations, owned club budgeting end-to-end, and mentored junior members on data-driven decision-making and portfolio analysis fundamentals across multiple cohorts.
- **Operations Head, Esports Club:** Directed cross-functional logistics, scheduling, and communication for competitive esports tournaments, coordinating multiple teams to consistently deliver seamless, high-quality experiences for every participant and spectator.
